I am a software developer with experience in full-stack web development, working with technologies such as Java, Spring Boot, Vue.js, TypeScript, JavaScript, PostgreSQL, and MySQL. I graduated in Systems Analysis and Development from FATEC São José dos Campos in 2024 and gained experience in frontend, backend, API development, database management, and software maintenance.

Professionally, I worked at UC Tecnologia do Brasil, where I started as a Development Assistant and later became a Junior Developer. During this period, I participated in requirements gathering, solution prototyping, frontend and backend development, bug fixing, and implementation of new features. I also gained experience working in collaborative development environments and contributing to business-critical systems.

Following that, I worked as a Junior Developer at ImovPago, focusing on developing web applications using TypeScript, Vue.js, and related technologies. Currently, I work as a Senior Developer at ARCI Real Estate Intelligence, where I contribute to the development of tenant analytics and real estate technology solutions, working on both front-end and back-end functionalities, integrations, system architecture decisions, and product improvements.

My technical skills include REST API development, SQL databases, Docker, Git, Linux environments, software architecture, and modern front-end frameworks. I learn quickly and enjoy solving complex problems, understanding business requirements, and delivering reliable and scalable solutions that add value for users and organizations.

In addition to technical skills, I value teamwork, communication, and continuous learning. I enjoy collaborating with cross-functional teams, taking responsibility for projects, and adapting quickly to new technologies and challenges.

Work Experience

Senior Front-end Developer

ARCI Inteligência Imobiliária

March 2026 to Present

Senior Developer role focused on developing and evolving platforms for the real estate market, working with Vue.js, TypeScript, APIs, and databases. Responsible for implementing new features, supporting critical systems, resolving incidents, conducting technical code reviews, and supporting architectural decisions, contributing to the scalability and reliability of solutions.

Mid-Level Software Developer

ImovPago-Campinas, SP

September 2025 to February 2026

Role as a Full Stack Developer, responsible for developing front-end functionalities (Vue.js/TypeScript), implementing business rules and APIs in the back-end, as well as database modeling and maintenance. Participation in bug fixes, continuous improvements, and production support, assisting in incident analysis and resolution to ensure the stability and evolution of the platform.

Junior Software Developer

UC Technology do Brasil-Campinas, SP

June 2025 to September 2025

Development and maintenance of web applications, working on both the frontend and backend. Participation in requirements gathering, solution prototyping, and API integration, contributing to the evolution and quality of the systems.

Development Assistant

UC Technology do Brasil-Campinas, SP

June 2023 to June 2025

Experience in requirements gathering, solution prototyping, as well as frontend and backend development.

Education

Systems Analysis and Development (Graduation)

FATEC São José dos Campos - Prof. Jessen Vidal-São José dos Campos, SP

August 2021 to August 2024

Skills

- Data visualization
- Spring Boot
- TypeScript
- JavaScript
- Front-end development
- Java
- React
- Vue.js

Languages

- English - Intermediate
